

Table top cultivation

Work smarter. Invest more sustainably.

Table top cultivation for strawberries is rapidly gaining traction worldwide. Growing at height offers more control, improved working comfort, and increased efficiency, especially now that labour is becoming scarcer and more expensive. The cultivation gutters are mounted on posts, making planting, crop maintenance and harvesting faster and less labour-intensive. This method is widely used in open field, film greenhouses, and in regions with challenging weather conditions.

Strong and modular: Raincover

For added protection, we offer the Raincover: the same cultivation gutter mounted on posts and fitted with a smart film cover. The steel brackets serve a dual function: they support the gutter while also forming the structural frame for the arch— an integrated solution that protects the crop against the rain and wind, significantly increasing yield security. Thanks to its sturdy, modular design, the system is easy to build, expand, and combine with various types of gutter.

Smart features for maximum ease of use

- ✓ Arches made from tubing instead of round steel provide a larger contact surface for the film, ensuring better support. This also allows the film to glide smoothly over the arches when being pulled aside.
- ✓ Adjustable end tensioners and crop wires: easily height adjustable to ensure optimal tension and support for your crop at all times.

metazet™

metazet.com

Combine with the right FormFlex® cultivation gutter:

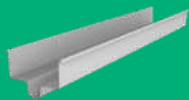

Choose the ideal gutter model based on your cultivation method and substrate. This allows you to create a system that is perfectly aligned to your crop requirements and labour strategy.

SKG

SKG

The SKG (channel) gutter provides strong lateral support for substrates and trays. Available in various heights and widths to suit your growing medium.

MK

MK

The MK (central channel) gutter is perfect for outdoor growing on racks or in combination with the Metazet Easy Cover. Its flat base makes it ideal for trays, containers or loose substrates. The central channel neatly houses a drain hose, ensuring efficient removal of drain water. The gutter is available in various heights and widths to fit your cultivation system.

Bespoke suspension and support

Proper support prevents fruit damage and makes picking faster and easier. Our specially designed brackets for truss and leaf support help reduce the required labour and maintain fruit quality. We also supply hooks for drip irrigation lines and other suspension materials. All products are developed, tested and manufactured in house so that we can deliver exactly what your crop needs – quickly and accurately.

Tailored solutions

Every cultivation setup is unique. That's why our systems are designed to adapt to your business – not the other way around.
